

## Oracle Exalogic Elastic Cloud 2.x: System Administration

**Duration:** 2 Days

### What you will learn

Note: No hands on lab environment for the TOD course.

This Oracle Exalogic Elastic Cloud 2.x: System Administration training helps you develop a deeper understanding of how Exalogic Elastic Cloud provides a high performance, high density, reliable and scalable data center solution based on ZFS storage, InfiniBand networking, Oracle VM and Oracle Linux. These unique components require specialized knowledge and skills; please note that this course is appropriate for X2-2, X3-2 and X4-2 users.

### Learn To:

Describe the initial configuration an Exalogic machine.

Connect to and manage all Exalogic hardware components.

Configure, mount, and monitor ZFS storage shares.

Configure and monitor InfiniBand networks.

Perform backup and recovery on an Exalogic system.

### Benefits to You

Painlessly and seamlessly integrate Exalogic into your existing data center. Develop the knowledge and skills to use the right tools to monitor, secure and troubleshoot Exalogic systems, including the hardware and virtualization infrastructure.

### Explore Shared Storage

Use the Oracle ZFS Storage Appliance to create shared file systems. Mount shared storage to hosts, and then monitor storage health and performance.

### Learn InfiniBand Networking

Gain insight into the unique configuration and performance characteristics of Exalogic InfiniBand (IB). Monitor gateway and spine switches, including VNICs, VLANs, and partitions.

### Understand Lifecycle Management

Perform regular system health checks and backups, and restore components if problems occur. Gather logs and other diagnostic information to help troubleshoot issues.

### Audience

Data Center Manager

Network Administrator

System Administrator

## Related Training

### *Suggested Prerequisites*

Familiarity with basic Unix network and storage concepts

## Course Objectives

Work with InfiniBand partitions, VNICs and VLANs

Use Exalogic lifecycle management tools

Configure Exalogic for disaster recovery

Locate and use checklists and worksheets to plan an installation

View device status and health with ILOM

Monitor rack hardware with Exalogic Control

Perform storage administration and maintenance tasks

Compare physical and virtual Exalogic configurations

## Course Topics

### **The Exalogic Solution**

Data Center Challenges

What is InfiniBand (IB)?

Engineered Solution

Multitenancy

Infrastructure as a Service (IaaS)

What is Exalogic Control?

Physical vs Virtual Data Center

Exalogic Versioning

### **Hardware Components**

Exalogic Machine Topology

Compute Nodes

Storage Appliance

InfiniBand Switches

IB Transceivers and Cables

Management Switch

Comparing Rack Configurations

Power Options

### **Initial Machine Configuration**

Using Oracle Installation Services

Exalogic Configuration Utility (ECU) Overview

IP over InfiniBand (IPoIB)

Ethernet over InfiniBand (EoIB)

- Default Networks
- Default Storage Projects
- Host Utilities
- DCLI Examples

### **Managing Hardware With ILOM**

- ILOM Network
- Changing the Root Password
- Powering the Device On and Off
- Locating the Device in the Data Center
- Viewing Hardware Status and Specifications
- Monitoring Power Consumption
- Configuring Alerts
- CLI Examples

### **Managing Hardware with Exalogic Control**

- Exalogic Control Architecture
- Starting and Stopping Exalogic Control
- Creating an Exalogic System Administrator
- Viewing Exalogic System Specifications
- Viewing Exalogic System Networks
- Navigating Rack Slots
- Monitoring Asset Hardware
- Creating an Exalogic System Report

### **Storage Configuration**

- Changing the Root Password
- Storage Pool
- Replacing Failed Hardware
- Configuring Services, Projects, and Shares
- Overriding Project Defaults
- Exalogic NFS Architectures
- Configuring a Compute Node for NFS
- CLI Examples

### **Network Configuration**

- Single Rack Network Topology
- Multi Rack Network Topology
- Replacing Failed Hardware
- Monitoring Connection Status
- Monitoring the Subnet Manager
- Working with Partitions
- Creating a VNIC
- Tagging a Gateway Port with a VLAN ID

### **Lifecycle Management**

- Exalogic Lifecycle Toolkit
- ExaCheck
- Automatic Service Requests
- ExaLogs
- Backup Recommendations
- ExaBR

## **Disaster Recovery**

Discovery Recovery Topology

Exalogic Storage Replication

Recommended Storage Network Topology

Creating a Replication Target

Configuring Replication for a Project

Oracle Site Guard Overview
